

Solar Powered Electric Valve Actuators

Clean, Reliable, Cost-Effective

Electrifying Valve and Meter Stations

Reduce green house gas emissions and enhance the safety of natural gas and liquids pipelines with electric valve actuators powered by Solarcraft

- INPUT: Solar panels and battery bank, utility line power, or a hybrid of both for extreme reliability; sized to effectively operate most any electric valve actuator
- OUTPUT: Single-Phase or 3-Phase 120VAC, 208VAC, 240VAC, 480VAC
- For actuators up to 20 horsepower; and additional control and communication equipment
- All Valve Station components – batteries, PLCs, and communication equipment can be housed in a single rugged Type 3R-4X enclosure
- Skid-mounted options for large solar arrays
- 5-Year Warranty

Solarcraft[™] THE POWER OF QUALITY

Block valve stations are crucial to controlling and maintaining pipelines – isolating sections of the line for maintenance and repair. In an emergency, sections of the pipeline are shut down remotely to safely stop the flow of product.

Installed along a pipeline every twenty to thirty miles, block valve stations are often in remote areas far from utility line power.

Prior to Solarcraft, solar power has been overlooked as a source of power for valve actuator sites. However, solar power is ideal – it is a long-lasting, reliable, and clean solution.

For over a decade, Solarcraft has designed and built complete solar solutions to power electric valve actuators. Capable of powering up to 20 HP, 480-Volt, 3-phase actuators, our power systems are sized specifically for your electric actuator. Block valve controls and communication devices can also be integrated with the actuator power system for a single complete package.

Once installed, solar is a low-maintenance, environmentally friendly and extremely reliable power solution.
